

Exercise(s)

4. 6. 2026

The last exercise is to be handed in at the beginning of the next lecture.

31. Study the 2:−1 resonance, the dynamics near an equilibrium on \mathbb{R}^4 with canonical Poisson structure that has the quadratic part

$$H_0^0(q, p) = p_1^2 + q_1^2 - \frac{p_2^2 + q_2^2}{2} .$$

32. Study the 1:−3 resonance, the dynamics near an equilibrium on \mathbb{R}^4 with canonical Poisson structure that has the quadratic part

$$H(q, p) = \frac{p_1^2 + q_1^2}{2} - 3 \frac{p_2^2 + q_2^2}{2} .$$

Exemplify your considerations for the cubic higher order term $H_1^0(q, p) = 2q_1q_2^2$.
